

Grinding/Polishing Cartridge for Apollo Ring Saw

Now you can grind and polish — at a fraction of the cost of using dedicated machines!

The new Grinding/Polishing cartridge for the Apollo Ring Saw expands the capabilities of the saw, ***allowing the user to bevel, grind, and polish glass, stone, jewelry, and more.***

The quick-change Grinding/Polishing cartridge sets-up easily on the Apollo Ring Saw. The grinding and polishing disc rotates vertically, allowing the user to easily obtain precise 90-degree edges. The cartridge sports an independent, gravity-fed water system for cooling and lubrication; the water is dispersed through the center of the discs for clean, optimum performance.

A variety of Diamond Grinding Discs and Polishing Pads are included. The package includes:

- One each 100- and 260-grit grinding discs
- Two 325-grit grinding pads (*as the first 325-grit pad wears down, it can then be used as a 500-grit pad for even better results*)
- One felt polishing pad
- One container of Cerium Oxide polishing compound.

All discs and pads have magnetic backs, are self-centering, and can be changed in an instant.
